Be careful with e-mail & Web

Cybercriminals are trying to trick you!

- **Do not open unexpected or suspicious e-mails or attachments.**
  Delete them if they do not concern you or if they appear weird. If in doubt, contact Computer.Security@cern.ch.

- **Stop-think-click.**
  Do not click on suspicious links, but only click if you trust their origin.

- **Protect your passwords.**
  Do not type them on untrusted computers or Web sites.

- **Do not install untrusted software or plug-ins.**
  Indeed, software from untrusted sources may infect or compromise your computer… or violate copyrights.
